MAT 137

Tutorial #2- Proofs September 27-28, 2022

Due on Thursday, Sept 29 by 11:59pm via GradeScope

- Submissions are only accepted by Gradescope. Do not send anything by email. Late submissions are not accepted under any circumstance. Remember you can resubmit anytime before the deadline.
- Submit your polished solutions using only this template PDF. You will submit a single PDF with your full written solutions. If your solution is not written using this template PDF (scanned print or digital) then you will receive zero. Do not submit rough work. Organize your work neatly in the space provided.
- Show your work and justify your steps on every question, unless otherwise indicated. Put your final answer in the box provided, if necessary.

We recommend you write draft solutions on separate pages and afterwards write your polished solutions here. You must fill out and sign the academic integrity statement below; otherwise, you will receive zero.

Academic integrity statement

I confirm that:

- I have read and followed the policies described in the Policies and FAQ.
- I understand that the collaboration of this worksheet is only among this group. I have not violated this rule while writing this worksheet.
- I understand the consequences of violating the University's academic integrity policies as outlined in the Code of Behaviour on Academic Matters. I have not violated them while writing this assessment.

By signing this document, I agree that the statements above are true.

Recall some proof techniques:

- To prove " $\exists x \dots$ ", say what x is.
- To prove " $\forall x \dots$ ", begin by fixing a generic x.
- To prove " $P \implies Q$ ", assume P is true and show that Q is true.

Write formal, rigorous proofs for these statements:

1. In tutorial 1, we have defined several concepts. Let A be a non-empty subset of \mathbb{R} .

We say A is excited if $\exists a \in \mathbb{R}$ such that $\forall x \in A, x \geq a$.

We say A is happy if $\exists a \in A \text{ such that } \forall x \in A, x \geq a$.

Below are three claims. Which ones are true and which ones are false? If a claim is true, prove it. If a claim is false, provide a counterexample and a justification of how the counterexample shows the claim is false.

- (a) If A is happy, then A is excited. T

 pf. Assuming A is happy, gives.

 \[\Pi a \in A \text{s.t. } \forall x \in A, x \div a.

 \]

 Shee A \sum IK.

 When a \in A, a \in K,

 Therefore, \Pi a \in K \text{s.t. } \text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\text{\$\
- (b) If A is excited, then A is happy. F

 False

 Jake A = (0,1) as a counter example

 Jake a = 0, a & IR,

 Let x & A. x & IR. 0 < X < 1.

 Therefore. x > a. Have shown A is excited.

 Negation of A is happy is:

 Ya & A. = x & A. s.t. x < a.

 Let a & A. Jake x = \frac{a}{2}.

 Since a & (0,1). x = \frac{a}{2} & (0,\frac{1}{2}). (0,\frac{1}{2}) \in A.

 Thus, x belongs to A

 Apparently. a > \frac{a}{2} = \frac{a}{2}.

 The regation is True.

 Jo conclude, the whole statement is false.

(c) If A and B are both happy and non-empty with $A \neq B$, then $A \cup B$ is happy.

True.

pf. Assuming A is happy and B is happy, gives.

FOR. S.t. YXGA. X+a.

3 ben. s.t. ∀268. x≥b.

Jaking. c = max fa, b}, ceAVB,

We can obtain x & AUB, which satisfies x=c. due to c & AUB.

Thus x=c =c.

Jo conclude 3 CBIR. S.b. HAG AUB. AZC.

2. For every positive number x > 0 and for every natural number $n \ge 2$,

$$(1+x)^n > 1 + nx.$$

Hint: Use induction.

 $Pf \cdot (1+x)^k > 1+kx$

Basic Case:

when k = 2. Since x>0. $C(+x)^2 = (+x^2 + 2x > 1 + 2x > 0)$.

Assuming when k=n. is True. $(H\times)^n > 1+n\times$.

When k=n+1. $(Hx)^{n+1}=(Hx)(Hx)^{n}$.

= $(HX)^n + x(HX)^n > HnX + x(HX)^n$

Since x>0. gives 1+x>1.

Therefore. A(1+x) ">x.

Thus. $|t n x + x(Hx)^n > |t n x + x| = |t (|t n) x$.

Revealing LI+X)n+1 > 1+(I+n)x
